Growth and marketing engineer behind a US fintech's acquisition funnel: tracking, consent, experimentation and warehouse pipelines across Webflow and Unbounce, plus AI agents that automate repetitive work.

PRIVACY COMPLIANCE
98.9%
of page views now load the consent manager, up from under 1.5%

AD MEASUREMENT
21%
of paid-ad visits never reached analytics, measured by a pipeline I built

CLICK SPEED
0.5 s
less wait after each button click, because I removed a pause in the old tracking code

AI AUTOMATION
36 pages
new pages added to outage monitoring by an AI agent using my audit tool

EXPERIENCE

Software Engineer · Flex

2024 – Present

MarTech & Growth Engineering · Remote

- **Consent-gated tracking platform.** Architected and own the identity → Amplitude → Transcend Airgap → GTM stack behind getflex.com (Webflow) and try.getflex.com (Unbounce): **8 CDN-delivered scripts** with QA/prod switching.
- **CPRA consent fix.** Found a feature-flag gate that kept the Transcend consent manager on under 1.5% of production page views; removing it lifted coverage to **98.9%**, and a "Do Not Sell" opt-out now stops GTM and every vendor pixel.
- **Paid-traffic measurement.** Built a CloudFront beacon → Athena → Snowflake pipeline (99.8% join coverage) that measured a **~21% gap** between paid-ad arrivals and analytics page views, correcting an earlier 45–52% estimate.
- **Click tracking and engagement events.** Moved click tracking to Amplitude autocapture (within 0.15% of legacy events), making CTAs navigate **~500 ms faster**, and fixed A/B exposure counts inflated 1.34–1.56×.
- **AI automation.** Created Flex's Claude Code plugin marketplace and two production plugins: gated legal publishing (Notion ticket → CDN page + PDF, human-only upload) and an uptime audit Flex's infrastructure agent runs unattended.
- **SEO and structured data.** Fixed placeholder titles across four CMS templates and added Article schema with bylines: Ahrefs had flagged **226 short-title pages**; a crawl of all 275 live pages afterwards found zero.
- **Flex Website 2.0 rebrand.** Owned **63 pages** of the Webflow rebrand (my third yearly site rebrand, after 2024 and 2025) and the 414-URL cutover inventory, then repaired the post-launch gaps (17 authors recreated, 222 CMS items re-linked, 49 legal files re-keyed).
- **Also shipped.** A serverless uptime poller watching 479 URLs (Python, AWS Lambda, Terraform, Datadog), a Braze lifecycle-email migration (36-field data contract), a Playwright + Lighthouse QA harness and a Zendesk help center with 600+ automated checks.

SELECTED PROJECTS

Freelance · WordPress & WooCommerce developer

2018 – 2024

Sites and stores for small businesses: Elementor and Divi builds, WooCommerce with MercadoPago checkout, a Tutor LMS course platform, custom plugins and n8n automations.

SKILLS

Analytics & consent: Amplitude (Analytics, Experiment, Session Replay) · GA4 · Google Tag Manager · Transcend Airgap (CPRA) · LaunchDarkly · A/B test instrumentation

Web & content: Webflow (CMS, Data API) · Unbounce · Zendesk Guide · WordPress/WooCommerce · HubSpot · SEO & JSON-LD

Data, cloud & code: SQL · Snowflake · Athena · JavaScript · TypeScript · Python · AWS (Lambda, S3, CloudFront) · Terraform · Datadog · PagerDuty · GitHub Actions

Ad, lifecycle & AI: Google Ads · Meta · TikTok · Singular · Braze · Iterable · Claude Code (plugins, skills, agents) · MCP · Cursor

Languages: Spanish (native); English (professional, used daily with a US team)
